DETAILED ACTION

Response to Amendment

1. In response to the Amendment received on January 2, 2004, the examiner has carefully considered the amendments.

Response to Arguments

2. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102/35 USC §103(a)

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

-

Application/Control Number: 10/058,737

Art Unit: 1711

5. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Berejka et al (4,300,988).

Berejka et al teaches polybutylene and conjugated diene butyl polymer blends. Said polymer blends can be cured by exposure to ionizing radiation. Said conjugated diene rubber is preferably the product of reaction of isobutylene and isoprene subsequently halogenated and then dehalogenated, wherein said conjugated diene amounts to less than about 5 mol% of the structure—see column 3, lines 35–50. Said polybutylene has a density of 0.91 or grater. Berejka et al does not expressly teach that said rubber composition or its crosslinked product has a density of at most 0.95. However, Berejka et al teaches the polybutylene has a density of 0.91 or more and the examiner contends that the addition of the conjugated diene rubber should increase the density of the composition to at least in the applicant range in the absence of evidence to the contrary. Since the Patent and Trademark Office is not equipped to conduct experimentation in order to determine whether Applicant' s composition differs and, if so, to what extent, from the discussed reference. Therefore, with the showing of the reference, the burden of establishing non-obviousness by objective evidence is shifted to the Applicants.

Allowable Subject Matter

- 6. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach the isobutylene copolymers listed in claim 2 in a method as defined by claim 1.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 4,343,864 to Berejka et al teach a radiation crosslinking rubber composition comprising isobutylene copolymers blended with polyethylene. 4,839,429 and 5,082,875 to

Application/Control Number: 10/058,737

Art Unit: 1711

Tajima teach crosslinking rubber compositions or articles comprising such blended with polyethylene of a certain molecular weight. The instant invention is distinguished over said documents but they are important in defining the state of the art.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sanza L McClendon whose telephone number is (571) 272-1074. The examiner can normally be reached on Monday through Friday 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
